

JARED LEMLER

Backend Engineer • Pacifica, CA • jaredlemle@gmail.com • jaredlemle.com • github.com/JL037 • linkedin.com/in/jaredlemle

SUMMARY

Backend Engineer building high-throughput, low-latency systems in Python/FastAPI and TypeScript, with a production data pipeline processing 200k+ daily operations at 96% reduced overhead. Driving development velocity through agentic workflows that optimize sprint planning, context harnessing, and automated testing. Brings 8 years of industrial electrical infrastructure experience into software engineering: a fail-safe mindset and rigorous systems thinking carried over from zero-tolerance-failure environments into resilient API and pipeline design.

PROFESSIONAL EXPERIENCE

VoxPort (voxport.live) — Federated Podcast Platform

Founder & Lead Engineer | Remote | Oct 2025 – Present

Technologies: Fastify, Next.js, ATProto, Prisma Postgres, Cloudflare R2, Fly.io, Vercel

- **Shipped a federated podcast platform:** Built end-to-end on the Bluesky ATProto ecosystem — creator studio, public listener pages, OAuth identity, R2 media pipeline, and Fly.io/Vercel deployment — serving live creators and listeners.
- **Built a firehose ingestion pipeline:** Filtered a 2,000+ events/sec Bluesky firehose to relevant-only events by configuring server-side collection filtering, dropping roughly 96% at the source across 7 collection types.
- **Database Operations Optimization:** Cut production DB operations 96% (~209k to ~3-8k ops/day) by adding in-memory caching, extending cursor flush intervals, and batching transaction writes, eliminating ~60k table scans/day. This helped reduce DB expenses.
- **Resolved an OAuth outage:** Restored PDS sign-in with 18x latency improvement by routing client-metadata.json through Cloudflare proxying, isolating Vercel IP routing as root cause via cross-network probes.
- **Hardened RSS import pipeline:** Secured our RSS import pipeline against SSRF and file-upload attacks by implementing magic-number validation, ffmpeg metadata stripping, and RFC-1918 blocking.
- **Eliminated external DAW dependency:** Built a browser-native recording booth with off-main-thread MP3 encoding and IndexedDB crash recovery, enabling non-destructive episode editing entirely in-browser.
- **Accelerated development velocity:** Integrated context harnessing and agentic onboarding workflows using open-weights models to automate sprint planning, issue tracking (via MCP/Linear/Notion), and test generation, significantly reducing manual overhead.

Backend Developer (On Contract) — Talk

Social Connection Platform • Remote | Jan 2025 – Feb 2026

Technologies: Python, FastAPI, TypeScript, React, Tailwind CSS, Vite, Cloudflare, Plausible Analytics

- **Reduced manual reporting effort by 90%:** Created automated data processing pipelines and visual analytics dashboards converting raw event metrics into business insights.
- **Served 200+ active university students:** Developed and deployed a privacy-compliant web platform using **React**, **Vite**, **Tailwind CSS**, and a custom FastAPI backend infrastructure.
- **Accelerated time-to-market:** Translated founder vision into production-ready software by rapidly converting interactive prototypes (Lovable) into full-stack solutions.
- **Increased user engagement:** Designed a custom QR-code trigger bridging physical events with digital experiences alongside optimized user onboarding workflows.

Journeyman Electrician — Gaylor Electric • Wolverine Electric • IBEW

Indiana & Michigan | 2017 – 2025

- **Led crews of 2–4 electricians** on high-visibility commercial jobsites, reading complex architectural blueprints to

deliver projects on schedule and to strict code standards.

- **Built and inspected critical electrical infrastructure** under zero-tolerance failure environments, developing deep live-system troubleshooting capabilities.
- Earned official Journeyman status through Associated Builders and Contractors (ABC); active dues-paying IBEW union member.

FEATURED PROJECTS

[doc-lok \(github.com/JL037/doc-lok\)](#) — Pre-Prompt Context Condenser

TypeScript, Node.js, Zero-Dep

- **Optimized LLM context windows:** Authored a **TypeScript** middleware library resolving remote Markdown links into compact cryptographic markers to cut token consumption and latency. Published on [npm](#).
- **Bypassed redundant downloads:** Constructed a two-phase verification engine using HTTP HEAD probes and ETag validation to cache remote docs efficiently.
- **Eliminated third-party vulnerabilities:** Developed a lightweight CLI tool and npm library relying strictly on native Node.js APIs.

[Travel Wishlist \(travelwishlist.app\)](#) — Location-Based Travel Planner

FastAPI, React, Docker, Postgres

- **Delivered ~100ms response times:** Built a city-based weather lookup system integrating external weather APIs with interactive mapping layers using FastAPI, PostgreSQL, and Docker.
- **Full-Stack Architecture:** Engineered JWT authentication workflows, Pydantic data validation schemas, and agenda calendar itinerary views.

SKILLS & TECHNICAL COMPETENCIES

Category	Skills
Languages & Core DBs	Python, JavaScript, TypeScript, SQL PostgreSQL, Prisma Postgres, Neon, Alembic, Schema Data Modeling, Index Optimization
Frameworks & Infra	FastAPI, Fastify, Next.js, Node.js, SQLAlchemy 2.0, Pydantic, Django, React, Prisma ORM AWS (EC2, Elastic Beanstalk, S3), Cloudflare R2, Fly.io, Hetzner
DevOps & Concepts	Docker, Git, GitHub, JWT, pytest, Sentry, OpenTelemetry, Axiom Pandas, ETL Pipelines, Batch Processing REST API Design, Distributed Systems, AT Protocol, WebSockets
AI Engineering	Agentic Workflows, Context Harnessing, Open-Weights Model Integration, Prompt Engineering, Test Harness Development

EDUCATION & CERTIFICATIONS

- **Journeyman Electrician:** Associated Builders and Contractors (ABC) Indiana • Completed multi-year vocational trade training combining technical classroom instruction with on-the-job industrial experience. Active dues-paying IBEW member.
- **Independent Study:** Ongoing practical study of Python, FastAPI, Fastify, Next.js, TypeScript, PostgreSQL, distributed systems, and the AT Protocol. Backed by 1:1 mentorship from senior engineers (former Facebook, Microsoft, and Prisma engineers).

WRITING & COMMUNITY

Published an AT Protocol developer skill ("atproto-pro") on <https://www.skills.sh/jl037/atproto-pro/atproto-pro>; written on <https://pckt.blog/b/jared-tries-to-blog> about building on the AT Protocol and RSS feed integration.
